Equipment Distribution and Recycling Software

30% Equipment Savings

What is Limitsor?

It is software that records all products distributed to personnel in a digital environment based on personnel without the need for a manual debit form.

With Limitsor software, equipment distribution is organized and equipment recycling processes are managed based on daily, weekly or monthly limits defined for employees .

It enables effective tracking of personal protective equipment (PPE) and other materials used in factories.

SOME OF OUR REFERENCES

Solutions

1. Card Reading Technology:

works with your existing personnel cards .
Equipment purchases are recorded and tracked
using employees' existing personnel cards.

2. Easy Integration:

The software integrates quickly with your existing
computers and ERP programs.

3. Recycling Management:

It automates processes and provides reports
for recycling used materials.

Solutions

4. Reporting and Analysis:

Personnel, product, department, and factory-wide reports can be filtered between two dates and can be printed in Excel or PDF format. Personal debit form reports can be generated digitally. Approximate equipment lifespans for products can be calculated and reported. Detailed reporting features analyze equipment usage, inventory status, and recycling data. Employee debit reports are minimized.

5. Rationed Product Distribution:

You can set limits for your staff on a daily, weekly, or monthly basis. Your staff can only purchase the products assigned to them. You can change staff products and limits through the software. Reporting user interfaces with as many different authorizations as you like can be opened free of charge.

How Does Limitsor Work?

Personnel can receive or return their assigned allowances by having their personnel cards scanned by the reading devices on the computer with the limiter interface installed in the distribution area of the warehouse. You can use your existing computers at the factory.

Company Logo	Personal Protective Equipment Delivery and Commitment Form
-------------------------	---

..... The personal protective equipment listed below was delivered to me for use while working at the facility.
I bought the equipment.

I have received the necessary information and training from my superiors and authorities on how and in what way to use these materials, which were tested for a certain period of time in the work site and were deemed appropriate and selected for use by technical managers, and the risks I would face if I did not use them.

I undertake to use the materials given from the beginning of the work until the end of the work shift, keeping them in the indicated place and applying for replacement when necessary, taking into account the work instructions and the issues in the Labor Law and Occupational Health and Safety regulations.

**What does
Limitsor bring to
you and your
factory?**

✓ Efficient Personal Protective Equipment Management:

Ask Limit optimizes equipment usage by setting daily, weekly, monthly, or annual limits for your employees. It prevents overconsumption and eliminates the risk of underuse and misuse. It streamlines operational processes and simplifies management.

✓ Cost Control and Savings:

The limited distribution system reduces waste in consumables, lowers inventory and equipment costs, and allows for more efficient use of your budget. It provides 30% equipment savings. The production process ensures the use of the required amount of equipment.

✓ Integration with High Technology:

It easily integrates with existing ERP programs and is compatible with existing personnel cards. You don't need to install any additional systems.

✓ **Traceable and Transparent Processes:**

Equipment distribution, usage, and recycling processes can be monitored in real time. All products in the factory are tracked by personnel. This allows you to both raise your occupational safety standards and ensure transparency through reporting. All reporting and consumption data can be accessed instantly. Personnel, product, department, and factory-wide reports can be filtered between two dates and can be printed in Excel or PDF formats.

✓ **Environmentally
Friendly and Sustainable
Approach:**

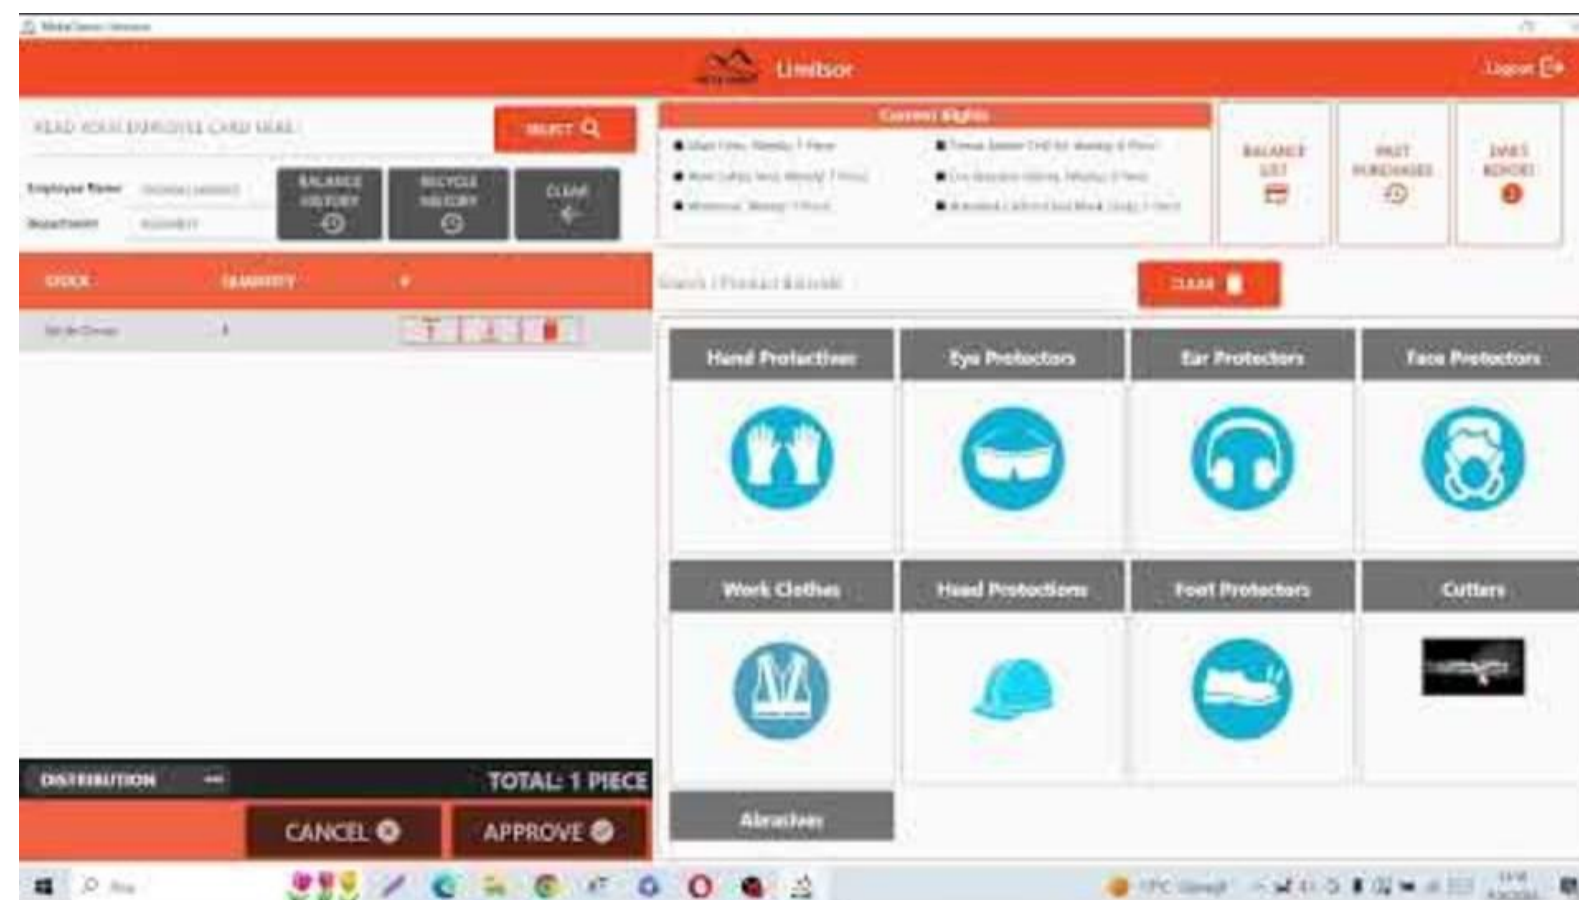

It provides environmentally friendly management with the ability to monitor recycling processes.
